

Week 4 Assignment

1. File Reader

- a. Expand UI to have folder option
 - i. Current folder should list a “..” and all subFolders in a folder list
 - ii. Double Click on“..” Takes you up a folder
 - iii. Double Click on folder takes you into that
 - iv. Folder List widget is connected to change the

2. List Widget

- a. Extended Selection for multiple selections
- b. Move that works with groups of UI elements
 - i. Groups your selection together when you move up/down
 - ii. Moves the group in the preferred direction
- c. Auto Parse for duplicate inputs (smart append)
 - i. With the files used in my example in class you can't have duplicate names, but I'd like to see code put in for this because the same subclass can be used in other places
- d. Anything else you think would be useful
 - i. Examples:
 - 1. Snap all selected to top or bottom of the stack
 - 2. Treating the selection as a list and shifting positions along that list

3. Final UI

- a. Just start thinking about what you want to do for your final assignment. It's all based on what you'd like to create for your own work and workflows.
- b. Start designing something to get your mind on track this week or next.
